

## De gebruiksvriendelijke oplossing voor een groot aantal verschillende bouwmaterialen

### UITVOERINGEN

- elektrolytisch verzinkt staal
- roestvast staal

### BOUWMATERIALEN

#### Goedgekeurd voor:

- Beton C12/15
- Geperforeerde baksteen
- Geperforeerde kalkzandsteen
- Volle kalkzandsteen
- Volle baksteen van lichtbeton
- Volle baksteen

#### Tevens geschikt voor:

- Natuursteen met hoge dichtheid
- Gipsblokken
- Holle bouwsteen van licht beton
- Drielaags samengestelde buitenwandpanelen
- Lichtgewicht beton

### GOEDKEURINGEN

ETA-13/0235  
ETAG 020 a, b, c

Meevoldige verankeringen voor niet-draagende bevestigingen in (gescheurd) beton en metselwerk

### VOORDELEN

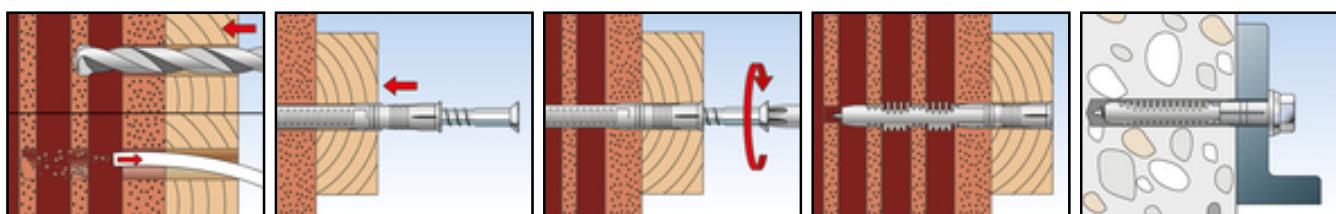

- Het universele werkingsprincipe met een verankeringssdiepte van 70 mm en unieke asymmetrische tanden maakt gebruik mogelijk in alle massieve en holle bouwmateriaLEN. Als zodanig is FUR de juiste keuze voor projecten waarvan het basismateriaal onbekend is; dit maakt altijd een stevige bevestiging mogelijk.
- De geavanceerde geometrie maakt een eenvoudige installatie mogelijk, zelfs bij dikke houten bevestigingen en smalle boorgaten.
- De FUR 14 voldoet aan de hoogste eisen wat betreft maximale gebruikslengten en afschuifbelastingen. Hierdoor is deze geschikt voor een groot aantal toepassingen.
- Europees Technische Goedkeuring voor metselwerk, gescheurd en ongescheurd beton.

### TOEPASSINGEN

- Gevel- en dakconstructies van hout en metaal
- Ramen
- Rachelwerk
- Hekwerken en deuren
- Bekledingen
- Binnenbevestigingen

### FUNCTIE

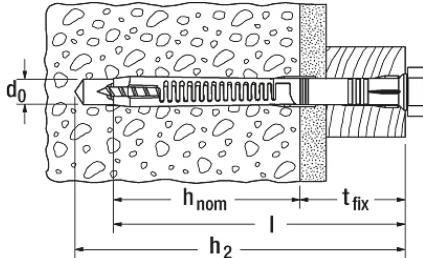

- De FUR is geschikt voor doorsteekmontage.
- Door de schroef naar binnen te draaien zetten de individuele tanden uit. In massieve materialen zorgen de tanden zelfs voor spreiddrukkrachten. In holle materialen zetten de tanden uit via het massieve deel van het blok en vormen ze een ondersnijding in de holte.
- Gebruik bij verticaal geperforeerde stenen alleen roterende machines (geen slagboren).
- Er worden verzonken schroeven aanbevolen voor installatie van houtconstructies; gebruik bij metaalconstructies ankers met zeskantkopschroeven en gegoten onderlegringen.

## LOADS

### Frame fixing FUR 8

Highest recommended loads<sup>1)</sup> for a single anchor for multiple fixings  
The given loads are valid for safety screws with the specified diameter

| Type  |                |      | FUR 8 |
|---|----------------|------|-------|
| Safety screw  | Ø              | [mm] | 6     |
| Min. edge distance in concrete  | a <sub>r</sub> | [mm] | 60    |
| <b>Recommended loads in the respective base material F<sub>rec</sub><sup>2)</sup></b> |                |      |       |
| Concrete  | ≥ C20/25       | [kN] | 1,00  |
| Solid brick   | ≥ Mz 12        | [kN] | 0,60  |
| Solid sand-lime brick   | ≥ KS 12        | [kN] | 0,60  |

<sup>1)</sup> Required safety factors are considered.

<sup>2)</sup> Valid for tensile load, shear load and oblique load under any angle.

## LOADS

### Frame fixing FUR<sup>4)</sup>

Highest permissible loads<sup>1) 6)</sup> for a single anchor for multiple fixings of non-structural applications in normal concrete ≥ C12/15 resp. ≥ B15. For the design the complete approval ETA-13/0235 has to be considered.

| Type          | min.<br>anchorage depth<br><b><i>h<sub>nom</sub></i></b><br>[mm] | min.<br>member thickness<br><b><i>h<sub>min</sub></i></b><br>[mm] | permissible<br>tensile load<br><b><i>N<sub>perm</sub></i></b> <sup>3)</sup><br>[kN] | permissible<br>shear load<br><b><i>V<sub>perm</sub></i></b> <sup>3)</sup><br>[kN] | min.<br>spacing<br><b><i>s<sub>min</sub></i></b> <sup>2)</sup><br>[mm] | min.<br>edge distance<br><b><i>c<sub>min</sub></i></b> <sup>2)</sup><br>[mm] |
|---------------|--|---|---|---|--|--|
|               |  |   |   |   |  |  |
| <b>FUR 10</b> | 70   | 110   | 1,8   | 1,8 <sup>5)</sup>   | 50   | 50   |

<sup>1)</sup> The required partial safety factors for material resistance as well as a partial safety factor for load actions  $\gamma_L = 1,4$  are considered. As an single anchor counts e.g. an anchor with a spacing  $s \geq s_{cr,N}$  and an edge distance  $c \geq c_{cr,N}$  according table 8 of the approval.

<sup>2)</sup> Minimum possible axial spacings (anchor group) resp. edge distance for concrete ≥ C16/20 while reducing the permissible load. The combination of the given min. spacing and min. edge distance is not possible. One of them has to be increased according approval. Values for concrete C12/15 see approval.

<sup>3)</sup> For combinations of tensile loads, shear loads, bending moments as well as reduced edge distances or spacings (anchor groups) see approval.

<sup>4)</sup> Valid for zinc coated screws and for screws made of stainless steel. For exterior use of the zinc coated screws measures against incoming humidity according approval have to be taken.

<sup>5)</sup> The permissible shear load determined acc. ETAG 020, Annex C considers exclusively steel fail of the screw. It amounts  $V_{perm} = 5,4$  kN for galvanised screws and  $V_{perm} = 5,0$  kN for screws made of stainless steel. Due to that the expected displacements will disable the proper function the fixture a maximum shear load on the basis of table 7 of the approval is recommended.

<sup>6)</sup> Valid for temperatures in the substrate up to +50 °C (resp. short term up to 80 °C).
