

## De economische all-rounder met Europese Technische Goedkeuring (ETA) voor massieve en holle bouwmaterialen

### UITVOERINGEN

- elektrolytisch verzinkt staal
- roestvast staal
- thermisch verzinkt staal

### GOEDKEURINGEN

### BOUWMATERIALEN

#### Goedgekeurd voor:

- Beton C12/15
- Geperforeerde baksteen
- Holle bouwsteen van licht beton
- Geperforeerde kalkzandsteen
- Volle kalkzandsteen
- Cellenbeton
- Volle bouwsteen van normaal- en lichtbeton
- Volle baksteen
- Thermische isolatieblokken

#### Tevens geschikt voor:

- Natuursteen met hoge dichtheid
- Gipsblokken

### VOORDELEN

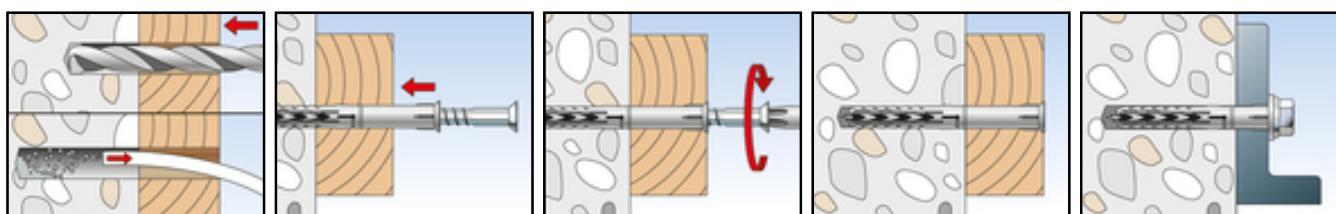

- De speciale werking maakt bij een verankерingsdiepte van slechts 50 mm het gebruik in massieve en geperforeerde bouwmateriaal mogelijk en zorgt zo voor een efficiënte bevestiging.
- De ETA-beoordeling dekt het gebruik in vele massieve en geperforeerde bouwmateriaal en garandeert daarmee een veilige bevestiging.
- De speciaal ontwikkelde combinatie van constructieplug en veiligheidsschroef zorgt voor een optimaal gebruik. De plug trekt voelbaar en biedt daardoor meer montagecomfort.
- Een omvangrijke assortiment met de diameters 6, 8 en 10 mm, met een bruikbare lengte tot 210 mm.

### TOEPASSINGEN

- Gevel-, plafond en dakconstructies van hout en metaal
- Ramen
- Hekwerken en deuren
- Kledingkasten
- Hangende keukenkasten
- Rachelwerk
- Beams
- TV consoles
- Wall covering
- Metal brackets
- Metal supports
- Kabelkanalen
- Cable trays

### FUNCTIE

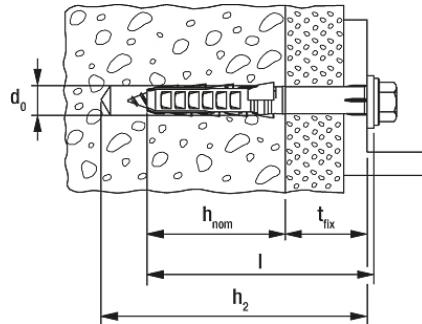

- De SXR is geschikt voor de doorsteekmontage.
- De SXR spreidt in massieve bouwmateriaal.
- In geperforeerde bouwmateriaal worden de lasten rond de stenen verdikkingen verdeeld.
- Bij betonblokken alleen draaiend boren (zonder slagmechanisme).
- Voor de bevestiging van houtconstructies wordt geadviseerd om schroeven met verzonken kop te gebruiken, bij metaalconstructies worden dat pluggen met een brede hulsrand en met zeskante kop met voor gevormde onderlegring.

SXR 10	≥ 6	AAC	50	100	0,27	200	100

<sup>1)</sup> The required partial safety factors for material resistance as well as a partial safety factor for load actions  $\gamma_L = 1,4$  are considered. As an single anchor counts e.g. an anchor with a minimum spacing  $s_{min}$  according table 11 resp. table 15 of the approval.

<sup>2)</sup> Minimum possible axial spacings (anchor group) resp. edge distance while reducing the permissible load. The combination of the given min. spacing and min. edge distance is not possible. One of them has to be increased according approval.

<sup>3)</sup> Valid for tensile load, shear load and oblique load under any angle. For combinations of tensile loads, shear loads and bending moments see approval.

<sup>4)</sup> Valid for zinc coated screws and for screws made of stainless steel. For exterior use of the coated screws measures against incoming humidity according approval have to be taken.

<sup>5)</sup> The given values for hollow or perforated masonry apply for rotary drilling (without impact). Given loads are reference values which may change due to type of brick and manufacture embedment depth is higher than  $h_{nom} = 50$  mm, job site tests have to be carried out.

<sup>6)</sup> Valid for temperatures in the substrate up to +50 °C (resp. short term up to 80 °C). For low temperatures up to 30 °C higher permissible loads may be possible.

<sup>7)</sup> Drill hole created by punching.

## LOADS

### Frame fixing SXR<sup>4)</sup>

Highest permissible loads<sup>1) 6)</sup> for a single anchor for multiple fixings of non-structural applications in normal concrete  $\geq C12/15$  resp.  $\geq B15$ . For the design the complete approval ETA-07/0121 has to be considered.

Type	Min. anchorage depth $b_{nom}$ [mm]	Min. member thickness $b_{min}$ [mm]	Cracked or Non-cracked concrete			
			Permissible tensile load $N_{perm}^{3)}$ [kN]	Permissible shear load $V_{perm}^{3)}$	Min. spacing $s_{min}^{2)}$ [mm]	Min. edge distance $c_{min}^{2)}$ [mm]
<b>SXR 8</b>	50	100	1,0	1,2 <sup>5)</sup>	50	50
<b>SXR 10</b>	50	100	1,8	2,0 <sup>5)</sup>	50	60

<sup>1)</sup> The required partial safety factors for material resistance as well as a partial safety factor for load actions  $\gamma_L = 1,4$  are considered. As an single anchor counts e.g. an anchor with a spacing  $s \geq s_{cr,N}$  and an edge distance  $c \geq c_{cr,N}$  according table 8 of the approval.

<sup>2)</sup> Minimum possible axial spacings (anchor group) resp. edge distance for concrete  $\geq C16/20$  while reducing the permissible load. The combination of the given min. spacing and min. edge distance is not possible. One of them has to be increased according approval. Values for concrete C12/15 see approval.

<sup>3)</sup> For combinations of tensile loads, shear loads, bending moments as well as reduced edge distances or spacings (anchor groups) see approval.

<sup>4)</sup> Valid for zinc coated screws and for screws made of stainless steel. For exterior use of the zinc coated screws measures against incoming humidity according approval have to be taken.

<sup>5)</sup> The permissible shear load determined acc. ETAG 020, Annex C considers exclusively steel fail of the screw. For SXR 8 It amounts  $V_{perm} = 4,2$  kN for galvanised screws and  $V_{perm} = 3,4$  kN screws made of stainless steel. For SXR 10 it amounts  $V_{perm} = 6,0$  kN. Due to that the expected displacements will disable the proper function of the fixture a maximum shear load on the basis of table 7 of the approval is recommended.

<sup>6)</sup> Valid for temperatures in the substrate up to +50 °C (resp. short term up to 80 °C). For long term temperatures up to 30 °C higher permissible loads may be possible.

## LOADS

### Frame fixing SXR

Highest recommended loads<sup>1)</sup> for a single anchor.

The given loads are valid for wood screws with the specified diameter.

Type			<b>SXR 6</b>
Screw diameter	$\emptyset$ [mm]		4,5
Min. edge distance in concrete	$a_f$ [mm]		50
<b>Recommended loads in the respective base material <math>F_{rec}^{2)}</math></b>			
Concrete	$\geq C20/25$ [kN]		0,25
Solid brick	$\geq Mz 12$ [kN]		0,20
Solid sand-lime brick	$\geq KS 12$ [kN]		0,20
Vertically perforated brick	$\geq Hz 12 (\rho \geq 1,0 \text{ kg/dm}^3)$ [kN]		0,10
Perforated sand-lime brick	$\geq KSL 12$ [kN]		0,20

<sup>1)</sup> Required safety factors are considered.

<sup>2)</sup> Valid for tensile load, shear load and oblique load under any angle.
